

day15\1_objectKeyValue.js

```
1  const obj = {
2      name: "rohan",
3      height: "175cm",
4      weight: "65 Kg",
5      ssn: 142077,
6      address: "167 plank road"
7  }
8
9  //- Object.keys(obj) extracts all the keys from the obj object and returns them as an
   array.
10 //That resulting array is then stored in the variable b.
11 let b = Object.keys(obj);
12 console.log(b);
13
14
15 //- Object.values(obj) extracts all the values from the obj object and returns them as an
   array.
16 //That resulting array is then stored in the variable a.
17 let a = Object.values(obj);
18 console.log(a);
19
20
21 //- Object.entries(obj) extracts all the keys-values pair from the obj object and returns
   them as an array.
22 //That resulting array is then stored in the variable c.
23 let c = Object.entries(obj);
24 console.log(c);
