

day17\6_arrayOfObjects.js

```
1 //array of objects:
2 const students = [
3   {
4     name: "sham",
5     age: 12,
6     marks: 50
7   },
8   {
9     name: "samir",
10    age: 13,
11    marks: 49
12  },
13  {
14    name: "luv",
15    age: 14,
16    marks: 57
17  },
18  {
19    name: "krysh",
20    age: 11,
21    marks: 55
22  }
23 ]
24
25 //here, the val denotes each object present inside the array:
26 //play by removing the return statement
27 const result = students.filter((val) => {
28   return val.marks > 50 //if the condition is true, then will gets stored into the
   result.
29 });
30 console.log(result);
31
32 //destructured the object value to get only marks
33 const result2 = students.filter(({marks, age}) => marks>50 && age>11);
34 console.log(result2);
35
36
37 //destructured the object value to get only age
38 const result3 = students.filter(({age}) => age>11);
39 console.log(result3);
40
41
42 //map
43 const ar = [1, 2, 3, 4, 6];
44 const ans = ar.map((element) => element*element); //all the updated valeus gets stored into
   the ans array
45 console.log(ans);
46
47
48 //using filter and map both simultaneously
49 //filter out all the even numbers and then using map square there values:
50 const array = [10, 20, 35, 87, 98];
```

```
51 | const res = arry.filter((val) => val%2 == 0).map((val) => val*val);  
52 | console.log(res);
```
