

day13\2_deepCopy.js

```
1 //in deep copy, actual separate copies are created and due to this it is called as deep
  copy because in this real copies gets created.
2 //always use structuredClone to do deep copy
3 let obj1 = {
4     a: 22,
5     b: 33
6 }
7 let obj2 = structuredClone(obj1); //two different objects gets created.
8
9 obj2.a = 77;
10
11 console.log(obj1, obj2); //two different copies are created and both obj1 and obj2 are the
   separate references.
```
