

day13\3_nestedObject.js

```
1 //nested object
2
3 const user = {
4   name: "yuan",
5   ssn: 12456,
6   //address property is nested object
7   address:{
8     zipcode: 789990,
9     "street number": "7-plank street"
10  }
11 }
12 console.log(user.address["street number"]);
13 console.log(user.address.zipcode);
14 console.log(user.ssn);
15
16 //assign() uses deep copy for non-nested properties
17 const user2 = Object.assign({}, user);
18 user2.name = "ryan";
19 user2.ssn = 81230;
20 console.log(user2, user);
21
22 //assign() uses shallow copy for nested object properties
23 user2.address["street number"] = "19-wood street";
24 console.log(user.address["street number"], user2.address["street number"]);
25
26 //the assign() and the spread operator use shallow copy for the nested object properties.
```
