

day21-DOM\code2.js

```
1 //a variable 'x' is created:
2 // and this variable 'x' holds an object:
3 const x = document.getElementById("h1tag");
4 console.log(typeof(x)); //typeof = object
5
6
7 //print the object 'x' of the h1 tag
8 console.log(x);
9
10
11 //print the content or text present inside the h1 tag object:
12 console.log(x.innerHTML);
13
14
15 //print the class name of the h1 tag object
16 console.log(x.className);
17
18
19 //print the id of the h1 tag object
20 console.log(x.id);
```
